

CAMPYLOBACTER GLYCOSYLTRANSFERASES FOR BIOSYNTHESIS OF GANGLIOSIDES AND GANGLIOSIDE MIMICS

5

ABSTRACT OF THE DISCLOSURE

This invention provides prokaryotic glycosyltransferases, including a bifunctional sialyltransferase that has both an α 2,3- and an α 2,8-activity. A β 1,4-GalNAc transferase and a β 1,3-galactosyltransferase are also provided by the invention, as are other
10 glycosyltransferases and enzymes involved in synthesis of lipooligosaccharide (LOS). The glycosyltransferases can be obtained from, for example, *Campylobacter* species, including *C. jejuni*. In additional embodiments, the invention provides nucleic acids that encode the glycosyltransferases, as well as expression vectors and host cells for expressing the glycosyltransferases.
